I really need to understand something that is vastly more important than I think it is.....

EDGE DOES NOT EXIST EVERYDAY IF YOU TRADE FUTURES

IT IS A RARE OCCURANCE AT BEST..... THERE IS NO SUCH THING AS BEING GREEN EVERYDAY TRADING THE EXACT SAME SETUP

Why do I try to trade size while my strategy is clearly suboptimal?

Strategy:

- IF (key word here) IF (this means only IF something occurs) 4/4 internals are in one direction, trade with them..... period.....over.....end of story

- IF (key word here) IF (ONLY IF SOMETHING OCCURS) 3/4 internals are in one direction, trade with them.....very conservatively

- IF (key FUCKING WORD here) IF (ONLY IF THIS OCCURS) INSERT ANY OTHER SCENARIO THAT EXISTS.....DONT TRADE.....AT ALL.....NOT ONE SINGLE EXECUTION.....NEVER.....EVER.....GO FUCK YOURSELF IF YOU THINK YOU CAN TRADE THIS SCENARIO....

You are genuinely not smarter than anyone else on this planet. when you think you are smarter than people you end up pretending that trading is something that is it not. Daytrading is all about creating a system and sticking to it perfectly.....nothing else. If you do truly anything other than that then go ahead.....kiss it goodbye. That is not a statement that is up for interpretation..it is vastly simple.. If 4/4 internals are in one

direction, trade with them aggressively. If 3/4 internals are in one direction, trade with them passively. That is truly that entire strategy and it ends there. You dont need to go search for some new indicator or some new way to trade. its sitting right fucking there. Trade the system and if you go a whole year doing that and you still lose then guess its time to make a new one. There is not 1 single scenario in any circumstance whatsoever that I trade anytime its worse than 3/4.....GOODBYE
